

*Civil and Environmental Engineering
Graduate Program*

**Program Information Manual for
Graduate Students**

**Academic Year
2023-2024**

Preface

This manual is intended to augment the sections of the Graduate School Bulletin dealing with academic policies and procedures and degree requirements. The student is strongly urged to read the Graduate School Bulletin carefully since all the vital information is not repeated herein. It is the student's responsibility to be aware of the current requirements of the Graduate School. Graduate School Policies and Procedures can be found using the following link:
<http://gsnb.rutgers.edu/academics/graduate-school%E2%80%93new-brunswick-policies-and-procedures>

This Manual also constitutes part of the Program Bylaws.

SECTION I: Master of Science

A) Degree Options

*The Master of Science degree requires the completion of at least **30** credits under two options:*

Option A: Requires a minimum of **24** credits of coursework plus a 6 credit thesis and a public oral defense of thesis.

Option B: Requires a minimum of **27** credits of coursework plus a **3** credit special project, and a final oral examination.¹

Students are free to choose between Options A and B, except graduate assistants, who are required to take Option A. The students choose a program of study outlined in **Section III**.

B) General Course Credit Requirements

Students must satisfy the following credit requirements toward the M.S. degree:

1. At least **18** credits of graduate courses must be taken from the Department of Civil and Environmental Engineering.
2. No credit in 300-level courses may be used toward the M.S. degree.
3. No more than **6** credits of 400-level Civil and Environmental engineering courses may be used toward the M.S. degree². *Special Problems in Civil Engineering and Co-op* courses cannot be used toward the MS Degree.
4. No more than **3** credits of either *Advanced Topics In Civil Engineering (180:601 or 180:602)* **or** *Advanced Topics in Environmental Engineering (180:611 or 180:612)* may be used toward the M.S. degree.
5. 180:701 and 180:702 can be used only for thesis research. These credits will not count toward coursework requirements.
6. At least **two** semesters (N credit prefix) of *Seminar in Civil and Environmental Engineering (180:691, 180:692)*

¹ *As per the Graduate School's requirement, he/she must demonstrate that he/she has the ability to write a creditable report as part of a regular course*

² *Courses approved by graduate director*

C) Scholastic Standing

Candidates for the M.S. degree shall have a GPA of 3.0 or better in their coursework. No more than **6** credits bearing the grade of C or C+ may be used to meet the requirements for the M.S. degree. His/her advisor monitors the student's academic performance. The students may be recommended for dismissal from the Graduate School by action of the graduate faculty.

D) M.S. Committee

The student's graduate committee will normally consist of three graduate program faculty members. The student's advisor will serve as chairperson. The graduate director upon the recommendation of the student's advisor will appoint members to the student's committee. The advisor will consult with the student on this matter. The graduate director in consultation with the advisor and the student will make any subsequent changes of committee members.

Option A: The committee will be appointed during the term in which the student commences his/her thesis research. Before embarking on the research, the student will submit a short proposal of the thesis work to his/her committee. The committee will be responsible for supervising the thesis research and conducting the public oral defense of thesis.

Option B: The committee will be appointed at the start of the semester in which the student will take his/her final oral examination. The student will work on a 3-credit project with his/her advisor and submit a scholarly report. The final oral examination is based on the work done in the project. The committee will be responsible for conducting the final oral examination.

E) Final Oral Examination

The final oral examination will be conducted by the student's committee near the end of the student's final term of work. The examination will consist of an oral presentation of the thesis or project report.

The student must bring with him/her the form *Application for Admission to Candidacy for Degree of M.S.* to the examination. The form must have been previously filed with the Graduate School early in the semester in which the student expects to take the examination. After the examination, the student will return the properly signed form to the Graduate School. One dissenting vote is allowed to pass a candidate for the degree. Students who fail the final

examination will be given the opportunity to retake the examination for a second and final time within one year of the first attempt.

F) Continuing to the Ph.D. Program

Students who completed the department's M.S. degree requirements and are interested in continuing to the doctoral program should file an application with the graduate director. The application should include a description of the research topic. Normally, the student is expected to have a grade point average of at least 3.5 in the M.S. coursework and must be recommended by the M.S. committee members. It is also required that the student have a faculty member who agrees to supervise the student's doctoral research. The student's M.S. committee will review the application and make a recommendation in writing to the graduate director for approval.

G) Time Limits

The normal maximum is three years after the first registration in the Graduate School. Part-time students will be allowed, without petitioning, a normal maximum of five years. Students requiring an extension beyond the normal time limits must petition, through the graduate director, to the Executive Council of the Graduate School on an appropriate form available from the Graduate School. The extension will be granted provided that the petition is supported by the student's satisfactory progress in his/her work and other valid reasons.

SECTION II: Doctor of Philosophy

The graduate program in civil and environmental engineering offers the degree Doctor of Philosophy that requires at least **48** credits of coursework and at least **24** credits of thesis research. The doctoral program is arranged in the following two phases.

Phase 1: The student pursues courses of study and successfully completes a qualifying examination.

Phase 2: The student primarily pursues courses of research and presents results in an acceptable dissertation.

A) General Course Credit Requirements

Students must satisfy the following credit requirements toward the Ph.D. degree.

1. At least **48** credits of coursework, which may include M.S. degree coursework, plus at least **24** credits of thesis research.
2. At least **30** credits of coursework must be taken from the Department of Civil and Environmental Engineering or **15** credits if entering with 24 transfer credits and MS degree in civil or environmental engineering.
3. No more than **6** credits of either *Advanced Topics in Civil Engineering (180:601 or 180:602)* or *Advanced Topics in Environmental Engineering (180:611 or 180:612)*.
4. No credit in 300-level courses and no more than **9** credits in 400-level courses may be used toward the **48** credits of required coursework.
5. At least **18** credits must be in courses within his/her major area of discipline.
6. At least **four** semesters (N credit prefix) of *Seminar in Civil and Environmental Engineering (180:691, 180:692)*.
7. At least **6** credits in the area of mathematics, numerical methods and statistics are required. Suggested courses in Applied Mathematics and Statistics are as follows:

Applied Mathematics

198:510	Numerical Analysis
642:516	Applied Partial Differential Equations
642:527,528	Methods of Applied Mathematics
642:550	Linear Algebra and Applications
642:573	Numerical Analysis
642:574	Numerical Analysis
642:575	Numerical Solutions of Partial Differential Equations
642:577,578	Selected Mathematical Topics in System Theory
642:581	Applied Graph Theory

Statistics

960:401	Basic Statistics for Research	(G3)
960:463	Regression Methods	(G3)
960:467	Applied Multivariate Analysis	(G3)
960:476	Introduction to Sampling	(G3)
960:484	Basic Applied Statistics	(G3)
960:486	Interpretation of Data	(G3)
960:490	Introduction to Experimental Design	(G3)
960:501	Statistical Theory for Research Workers I	
960:502	Statistical Theory for Research Workers II	
960:555	Nonparametric Statistics	
960:563	Regression Analysis	
960:590	Design of Experiments	
960:654	Stochastic Processes	

B) Scholastic Standing

Students enrolled in the Ph.D. program are expected to have a GPA of 3.5 or better in their coursework. No more than **9** credits bearing the grade of C or C+ may be used to meet the requirements for the Ph.D. degree. His/her advisor monitors the student's academic performance. The students may be recommended for dismissal from the Graduate School by action of the faculty of the graduate program.

C) Admission to Ph.D. Candidacy

The student becomes a Ph.D. candidate upon passing a qualifying examination. He/she is strongly urged to take the qualifying examination as soon possible, but no later than two academic semesters after completion of his/her M.S. course requirements. The Ph. D. candidacy examination is composed of a written examination followed by an oral qualifying (proposal) examination.

- 1. Written Examination:** This examination is suggested to be taken by the student no later than two academic semesters after completion of his/her M.S. course requirements and will normally be offered twice during the academic year (last Monday of October and March). The student who intends to take the examination must inform the Graduate Director at least one month before the examination date.

The **written** examination consists of a 3-hour closed book written examination offered by the committee. An oral examination may be required from the committee member depending on the results of the written examination. The examination is given by a committee made up of

at least two faculty members from the student's area of major study and at least one from an area other than the student's major area, all from CEE graduate program. The graduate director in consultation with the student's advisor appoints the committee. Students are encouraged to consult with the committee members on the subject area of their examinations. Students are permitted to take one re-examination within the time period of no later than one semester after the first examination.

2. **Proposal Examination (Qualifying):** The student will submit a short thesis proposal to his/her Ph.D. committee at least one week prior to the *oral* examination. The student must bring with him/her the form "Application for Admission to Candidacy for the Degree of Doctor of Philosophy" obtainable from the Graduate School. The examination will cover the proposed research. One dissenting vote is allowed to pass the student in his/her *oral* examination. After the examination, the student will return the candidacy form, properly signed by the committee, to the Graduate School. Approval of this form represents admission to Ph.D. candidacy. Students are permitted one re-examination after the initial proposal examination based on the committee's recommendation.

D) Ph.D. Committee

The graduate director, in consultation with the student's advisor, during the time interval between the written and oral qualifying examinations, will appoint the student's Ph.D. committee. The committee will be responsible for conducting the oral qualifying examination, for supervising the thesis research, and conducting the public thesis defense.

The committee will consist of at least four faculty members, with the student's advisor as chairperson. At least one of the committee members will be from outside of the program of civil and environmental engineering. A majority of the committee members must be chosen from within the program.

E) Dissertation Defense

This public examination covers the student's Ph.D. research work and thesis. His/her Ph.D. committee will conduct it. One dissenting vote is allowed to pass the student for the degree. At the time of the examination, it is the responsibility of the candidate to retrieve from the Office of the Graduate School his/her candidacy application (on which the results of the qualifying examination appear) and submit it to the chairperson of his/her committee. The student must return this form properly signed by the committee to the Graduate School along with the required original copy of his/her thesis and other materials (see the Graduate School catalog).

In order to prepare and distribute appropriate announcements, the graduate director must be informed of the thesis title, the date, and time of the thesis defense at least ten days in advance by the chairperson of the committee.

F) Time Limits

The normal maximum for a student entering the program with a B.S. degree is seven years after the first registration in the Graduate School. The normal maximum for a student entering the program with a M.S. degree is six years after the first registration in the Graduate School. Part-time students will be allowed, by petitioning the Graduate School, a time extension of one to three years beyond the normal limits given above.

Students requiring an extension beyond the normal time limits must petition the graduate director and the Executive Council of the Graduate School on an appropriate form available from the Graduate School. The extension will be granted provided that the petition is supported by the student's satisfactory progress in his/her work and other valid reasons.

G) Guidelines on thesis/dissertation time requirements

As a general rule, material should be submitted by the student at least two weeks before an examination or other deadlines and at least two weeks (but not more than four weeks) should be allowed the faculty member for informing students of the assessment. This may vary with the nature of the discipline and would of course have to be adjusted for exceptional circumstances. Exceptions, to be determined by each graduate program, might include end-of-semester "crunch", faculty members in the field without good access to the internet, and medical incapacity.

It is strongly recommended that one-year minimum be maintained between proposal presentation and final defense. The waiver of one-year minimum need be initiated by the Ph.D. advisor and approved by Graduate Director.

SECTION III: Programs of Study

The Department of Civil and Environmental Engineering offers the following specialties: (a) Construction Engineering, (b) Geotechnical Engineering, (c) Structures, (d) Transportation, (e) Water Resources and Environmental Engineering. In addition, The Department is offering in collaboration with other graduate programs two graduate certificate programs in (a) Engineering Geophysics and (b) Transportation Studies.

A) Specialty Requirements

Students in the M.S. and Ph.D. programs are required to choose a specialty. For each specialty in the graduate program the student is required to take:

- M.S.** •At least four departmental courses in their area of specialty
•At least two departmental electives outside of their specialty

- Ph.D.** •At least 18 credits must be in courses within major area of discipline

Students interested in taking course outside of the department are strongly encouraged to consult the list of suggested courses listed in **Section III-C** of this manual.

B) Departmental Courses Listed by Specialties

Construction Engineering

- 180:516 Advanced Structural Design (3)*
- 180:541 Advanced Reinforced Concrete (3)*
- 180:512 Advanced Concrete Technology (3)*
- 180:545 Advanced Construction Engineering Management (3)*
- 180:546 Advanced Construction Engineering Management II (3)*
- 180:548 Infrastructure Management System (3)*
- 180:554 Sustainable Transportation Infrastructure (3)*
- 180:561 Advanced Water Supply and Sewerage (3)*
- 180:562 Design of Water and Wastewater Treatment (3)*
- 180:572 Soils Engineering (3)*
- 180:577 Advanced Foundation Engineering (3)*
- 180:550 Building Information Modeling*
- 180:556 Methods/Models of Resilient Building and Infrastructure (3)*
- 180:595 Civil Infrastructure and Land Development (3)*
- 180:596 Construction Management and Land Development (3)*

Geotechnical Engineering

180:535 Mechanistic Pavement Design (3)
180:549 Advanced Pavement Material and Modeling (3)
180:570 Sustainability in Geo-Environmental Engineering (3)
180:571 Advanced Soil Mechanics (3)
180:572 Soils Engineering (3)
180:573 Excavation Retaining Systems (3)
180:574 Groundwater Engineering I (3)
180:575 Theoretical Soils Mechanics (3)
180:576 Groundwater Engineering II (3)
180:577 Advanced Foundation Engineering (3)
180:578 Soil Dynamics (3)
180:579 Environmental Management of Maritime Infrastructure (3)
180:580 Engineering Rock Mechanics (3)
180:581 Physiochemical Properties and Stabilization of Soils (3)
180:582 Dynamic Soil Structure Interaction and Earthquake Eng (3)
180:584 Geosynthetics in Sustainable Geoenvironmental Eng (3)

Structure Engineering

Students in structures are required to take 180:516 and 180:541 first when the courses were offered

180:512 Advanced Concrete Technology (3)
180:514 Composite Materials in Civil Engineering (3)
180:515 Structural Analysis (3)
180:516 Advanced Structural Design (3)
180:517 Structural Dynamics (3)
180:518 Design for Lateral Loads (3)
180:519 Advanced Structural Analysis (3)
180:521 Fatigue and Fracture of Structures (3)
180:522 Finite Element Methods in Civil Engineering (3)
180:524 Bridge Design I (3)
180:525 Structural Reliability (3)
180:527 Bridge Design II (3)
180:541 Advanced Reinforced Concrete (3)
180:542 Advanced Reinforced Concrete II (3)
180:544 Prestressed Concrete (3)
180:553 Bending and Buckling of Plates and Shells (3)

Transportation Engineering

180:530 Maritime Transportation (3)
180:531 Traffic Engineering (3)
180:532 Transportation Planning (3)
180:533 Traffic Operations (3)

180:534 *Design of Transportation Facilities* (3)
180:535 *Mechanistic Pavement Design* (3)
180:536 *Transportation Systems Analysis* (3)
180:537 *Intelligent Transportation Systems* (3)
180:538 *Freight Transportation Systems* (3)
180:548 *Infrastructure Management System* (3)
180:549 *Advanced Pavement Material and Modeling* (3)
180:551 *Railroad Transportation System* (3)
180:552 *Engineering Risk Anal. in Multimodal Transp. Systems* (3)
180:554 *Sustainable Transportation Infrastructure* (3)
180:555 *Railway Track Engineering and Safety* (3)
180:557 *Railway Data Analytics* (3)
180:579 *Environmental Management of Maritime Infrastructure* (3)

Water Resources and Environmental Engineering

180:560 *Air Quality Management*
180:561 *Advanced Water Supply and Sewerage* (3)
180:562 *Design of Water and Wastewater Treatment* (3)
180:563 *Advanced Hydrology* (3)
180:564 *Unit Processes in Environmental Engineering* (3)
180:565 *Biogeochemical Engineering* (3)
180:566 *Sediment Transport* (3)
180:567 *Analysis of Receiving Water Quality* (3)
180:568 *Thermal Effects of Receiving Waters* (3)
180:569 *Environmental Informatics* (3)
180:570 *Sustainability in Geo-Environmental Engineering* (3)
180:574 *Groundwater Engineering I* (3)
180:576 *Groundwater Engineering II* (3)
180:579 *Environmental Management of Maritime Infrastructure* (3)
180:586 *Advanced Fluid Mechanics* (3)
180:588 *Theory of Hydraulic Models* (3)
180:590 *Coastal Engineering* (3)
180:591 *Sustainable Environmental Biotechnology* (3)
180:592 *Green Infrastructure for Water Management* (3)
180:593 *Quantitative Microbial Risk Assessment & One Health Engineering* (3)

C) Suggested Courses Outside of the Department*

Computer Sciences

198:510 *Numerical Analysis* (3)
198:521 *Linear Programming* (3)
198:527 *Computer Methods for Partial Differential Equations* (3)

Ecology and Evolution

215:506 Estuarine Ecology (4)

Environmental Sciences

375:509 Groundwater Pollution (3)

375:525 Principles of Solid Waste Management & Treatment (3)

375:530 Hazardous Waste Management (3)

375:531 Biological Waste Treatment (3)

375:533 Water Law (3)

375:541 Environmental Models (3)

Geological Sciences

460:408 Geomorphology (3)

460:516 Advanced Structural Geology (3)

460:555 Geophysics I (3)

460:556 Geophysics II (3)

Industrial Relations and Human Resources

545:610 Selected Problems in Industrial Relations (3)

Industrial and Systems Engineering

540:510 Deterministic Models in Industrial Engineering (3)

540:515 Stochastic Models in Industrial Engineering (3)

540:522 Operations Research (3)

540:530 Forecasting and Time Series Analysis (3)

*540:535 Graph Theory & Networks in Industrial Engineering and
Operations Research (3)*

540:575 Advanced Engineering Economics (3)

Labor and Industrial Relations

578:521 New Directions In Collective Bargaining

Applied Mathematics

642:516 Applied Partial Differential Equations (1)

642:527,528 Methods of Applied Mathematics (3)

642:550 Linear Algebra and Applications (3)

642:573,574 Numerical Analysis (3)

642:575 Numerical Solutions of Partial Differential Equations (3)

*642:588 Introduction to Mathematical Techniques in Operations
Research (3)*

Mechanical and Aerospace Engineering

650:529 Random Vibration (3)

650:550 Advanced Mechanics of Materials (3)

650:540 Fluid Mechanics (3)

650:571 *Introduction to Mechanics of Continua (3)*
650:572 *Theory of Elasticity (3)*
650:573 *Theory of Plasticity and Applications (3)*
650:575 *Finite Element Methods in Solid Mechanics (3)*
650:577 *Mechanics of Composite Materials (3)*
650:585 *Fracture Mechanics (3)*
650:588 *Stress Waves in Solids (3)*

Mechanics

654:583 *Advanced Theory of Elasticity (3)*

Oceanography

712:501 *Physical Oceanography*
712:615 *Geophysical Data Analysis*

Statistics

960:401 *Basic Statistics for Research (G3)*
960:463 *Regression Analysis (G3)*
960:563 *Regression Analysis (3)*
960:580 *Basic Probability (3)*
960:582 *Introduction to Methods and Theory of Probability (3)*
960:590 *Design of Experiments (3)*
960:654 *Stochastic Processes (3)*

Management (for Construction Majors Only)

010:577 *Accounting for Managers (3)*
390:587 *Financial Management (3)*
835:578 *Management of Operations (3)*
MBA 22 620 685/686 CTEC 1: *Discovery to Business Model*

*students interested in taking a course not on the above list of suggested courses should get approval of their advisor and the graduate director.

SECTION IV: Academic Advisors

At the beginning of the first term of study, each newly admitted graduate student would be assigned a provisional academic advisor who is chosen with respect to the student's area of specialization.

The student is expected to contact the faculty members in his/her area of specialization and discuss possible topics for either a thesis or special project. This should be done for the M.S. student during the second semester and for the Ph.D. student prior to taking the qualifying examinations. The student should seek a faculty member who agrees to guide his/her thesis or special project. He/she then informs the graduate director, who will then appoint the faculty member as the student's advisor.

Subsequent changes of advisor may be made when special conditions arise. In such cases, the student must discuss the problem with his/her current advisor and the graduate director for a solution. However, students should be aware that such changes might create practical problems, such as loss of time and efforts and possible loss of support for graduate assistants. The student must file a "change of advisor" form with the graduate director.

SECTION V: Thesis

The following provisions apply to both M.S. and Ph.D. theses. The deadlines for submission of the **first** draft should be:

- 1) February 15th for May graduation
- 2) April 15th for October graduation
- 3) November 1st for January graduation

Prior to the deadlines, the **candidate** should submit copies of the **first** draft to his/her advisor for distribution to the committee members. Three copies (four copies for the Ph.D. candidate) of the **final** draft that conform to the instructions given in the pamphlet "Style Guide for Thesis and Dissertation Preparation", available from the Office of the Graduate School, should be submitted to the advisor prior to setting a date for the public thesis defense.

After the thesis defense the student may be required to make modification to his/her **final** draft. The student then submits the thesis to the graduate school, the Department, and advisor. The Graduate School requires that photocopies be made on bonded paper. A biographical sketch, a thesis abstract not exceeding 350 words, and approval by the advisor is required by the Graduate School.

The announcement for the final examination is the responsibility of the graduate director and will be made at the request of the advisor and in consultation with all members of the committee.

Expenses for thesis preparation, including the cost of drawings, photographs, reproductions, and printing, are the sole responsibility of the student.

The advisor in consultation with the student will decide the manner or format of publication of the thesis or research results.

SECTION VI: Seminars

Since the departmental seminars are the vehicles by which the faculty and graduate students are exposed to the research activities, within and outside of the departments, M.S. students are required to complete at least two semesters and Ph.D. students at least four semesters of seminars. (180:691 or 780:692, N credit prefix).

SECTION VII: Transfer of Credits

Students will be allowed to transfer no more than **12** credits toward the M.S. degree and no more than **24** credits toward the Ph.D. degree. The transferred credits must satisfy the requirements set forth in Sections I & II. No more than 6 online graduate credits may be transferred to the MS degree. Students who are already in the program and want to take a graduate course at another school, should get the approval of their advisor and the graduate director.

SECTION VIII: Non-Civil Engineering Graduates

Graduate applicants with a bachelor degree in engineering other than civil engineering should take the required basic civil engineering courses and additional undergraduate courses in their area of specialization. The following courses are required for each area of specialization:

Structural engineering

1. Mechanics of Solids (180:243)
2. Soil Mechanics (180:372)
3. Fluid Mechanics (180:387)
4. Structural Analysis I (180:318)
5. Steel Design (180:320)
6. Reinforced Concrete (180:411)
7. Foundation Engineering (180:473)

Environmental engineering

1. Mechanics of Solids (180:243)
2. Fluid mechanics (180:387)
3. Soil Mechanics (180:372)
4. Water and Wastewater Engineering (180:429)

Transportation engineering

1. Mechanics of solids (180:243), or Fluid mechanics (180:387), or Soil mechanics (180:372)
2. Transportation Engineering (180:364) or Transportation Planning (180:430)
3. Basic Probability & Statistics (960:379)

Construction engineering and management

1. Mechanics of solids (180:243), or Fluid mechanics (180:387), or Soil mechanics (180:372)
2. Construction Engineering (180:305)
3. Construction Engineering Management (180:406)

Geotechnical engineering

1. Mechanics of Solids (180:243)
2. Soil Mechanics (180:372)
3. Fluid Mechanics (180:387)
4. Foundation Engineering (180:473)

These requirements must be met early in the students' curriculum because many are pre-requisites for graduate courses. The student need to earn grades of B or better in the listed courses.

SECTION IX: Appeal and Grievance

A student should first discuss his/her grievance with their advisor. If the matter cannot be resolved the student may appeal to the graduate director. The graduate director shall consult with all parties involved and propose a resolution. If this is not successful, the matter shall be referred to the program faculty. Although the program faculty's decision shall normally be final, the student may further appeal to the Dean of the Graduate School.

Dr. Qizhong Guo---- qguo@soe.rutgers.edu

Dr. Yalin Li--- yalin.li@rutgers.edu

Dr. Monica Mazurek---- mmazurek@soe.rutgers.edu

Dr. Efthymios Nikolopoulos--- efthymios.nikolopoulos@rutgers.edu

Dr. Roger Wang---- rq.wang@rutgers.edu

Geotechnical Engineering

Dr. Nenad Gucunski---- gucunski@soe.rutgers.edu

Dr. Ali Maher---- mmaher@soe.rutgers.edu

Dr. Tyler Oathes--- to193@rutgers.edu

Dr. Hao Wang--- hwang.cee@rutgers.edu

Transportation

Dr. Jing (Peter) Jin--- peter.j.jin@soe.rutgers.edu

Dr. Xiang Liu--- xiang.liu@soe.rutgers.edu

Dr. Hao Wang--- hwang.cee@rutgers.edu

Structural Engineering

Dr. P.N. Balaguru---- balaguru@soe.rutgers.edu

Dr. Husam Najm---- hnajm@soe.rutgers.edu

Dr. Hani Nassif---- nassif@soe.rutgers.edu

Dr. Yook-Kong Yong--- yyong@soe.rutgers.edu

Degree Checklist
Master of Science

Field: _____

Advisor: _____

Degree Option: *Thesis**(24 course credits) *Special Project* (27 course credits)

Courses (at least 18 credits from Civil and Environmental, 4 courses must be from area of specialty)

<u>Course</u>	<u>Credits</u>
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

Departmental Electives (at least 2 courses outside of the area of specialty)

<u>Course</u>	<u>Credits</u>
_____	_____
_____	_____
_____	_____
_____	_____

Graduate Seminar (Must take 2 semesters)

1st Semester: _____

2nd Semester: _____

Research Credits* (must have 6)

Special Project (3credits)

Degree Checklist
PhD

Field: _____

Advisor: _____

Pre-Qualification: _____

Proposal: _____

Courses-48 credits (at least 30 credits from Civil and Environmental, 18 credits must be within field)

<u>Course</u>	<u>Credits</u>
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

Math/Numerical Methods/Statistics (at least 6 credits)

<u>Course</u>	<u>Credits</u>
_____	_____
_____	_____
_____	_____
_____	_____

Research Credits (Must have 24)

____ _ ____ _ ____ _ ____ _ ____ _ ____ _ ____ _ ____ _ ____ _ ____ _ ____ _

Graduate Seminar (Must take 4 semesters) _____

Quick Reference Tips

- All Master students MUST take 2 semesters of seminars
- All PhD students MUST take 4 semesters of seminars
- Special Project credits are NOT the same as Research Credits
- GA/TA/Fellowship credits do NOT count as Research Credits, you must register for research credits separately
- When writing your thesis/dissertation please refer to the Graduate School's style guide. They are particular about formatting.
- When planning your presentations for both MS and PhD, please remember to inform Gina.
- Keep in mind the deadline dates issued by the Graduate School for candidacy forms, thesis/dissertation submissions and diploma applications. <http://gsnb.rutgers.edu/academics/checklist-phd-degree>
- Most importantly, don't forget we are here to help and make your path toward your degree go as smoothly as possible. Please contact us with any questions or concerns.
- MS Special Project: you need to make a presentation of your project to a 3-member committee. Select committee members in coordination with your advisor and provide them with a copy of your special project at least seven (7) days before your presentation.
- MS Thesis: you need to make a presentation of your thesis to a 3-member committee. Select committee member in coordination with your advisor and provide them with a copy of your thesis at least 10 days before your presentation.
- PhD Dissertation: you need to make a dissertation defense to a 4-member committee. Select committee members in coordination with your advisor and provide them with a copy of your dissertation at least two weeks before your presentation.

Our Graduate Faculty

Dr. Perumalsamy N. Balaguru received his PhD from The University of Illinois-Chicago. His areas of research include concrete structural systems; composite materials; construction management.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 322C. He can be reached via email at balaguru@soe.rutgers.edu or via telephone at 848-445-2877.

Dr. Vassiliki Demetracopoulou received her Ph.D. from The University of Texas at Austin. She holds a Professional Engineer's license in Greece. Her areas of research include project delivery methods, decision-making for infrastructure systems, risk management, and asset management.

Her office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 428A. She can be reached via email at v.demetracopoulou@rutgers.edu or via telephone at 848-445-2794.

Dr. Nicole Fahrenfeld received her PhD from Virginia Tech. Her areas of research lie at the interface of environmental chemistry and environmental microbiology to promote water quality and sustainability, with applications in natural and engineered systems.

Her office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328D. She can be reached via email nfahrenf@rutgers.edu or via telephone at 848-445-8416.

Dr. Jie Gong received his PhD from the University of Texas at Austin. His areas of research include building information modeling, remote sensing for highway asset management, visual sensing and computing for construction process visualization and analysis.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 420D. He can be reached via email at jg931@soe.rutgers.edu or via telephone at 848-445-2881.

Dr. Nenad Gucunski received his PhD from The University of Michigan. His areas of research include soil-structure interaction; nondestructive testing; numerical methods; soil and structural dynamics; earthquake engineering.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 420C and 304C (chair office). He can be reached via email at gucunski@soe.rutgers.edu or via telephone at 848-445-0261.

Dr. Qizhong (George) Guo received his PhD from The University of Minnesota. He holds a Professional Engineer's license. His areas of research include environmental hydraulics; water quality; environmental, coastal, urban and cold regions applications; sediment transport.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328F. He can be reached via email at gguo@soe.rutgers.edu or via telephone at 848-445-2983.

Dr. Jing (Peter) Jin received his PhD from The University of Wisconsin-Madison. His areas of research include Transportation Engineering, Intelligent Transportation Systems, Traffic Operations, Traffic Sensing, Traffic Flow theory and Network Modeling, Urban Data Analytics, Traffic operations and management

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 420F. He can be reached via email at peter.j.jin@rutgers.edu or via telephone at 848-445-8563.

Dr. Xiang Liu received his PhD from The University of Illinois at Urbana-Champaign. His areas of research include Hazardous Materials Transportation Risk Analysis, Statistical Modeling of Train Safety, Economic Analysis of Railway Infrastructure Investment.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 428D. He can be reached via email at xiang.liu@rutgers.edu or via telephone at 848-445-2868.

Dr. Meiyin Liu received his PhD from the University of Michigan. Her areas of research include construction management; computer vision; and ergonomic risk assessment for construction workers.

Her office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 420E. She can be reached via email at meiyin.liu@rutgers.edu or via telephone at 848-445-2880.

Dr. Yalin Li received her Ph.D. from Colorado School of Mines. Her areas of research include water and wastewater treatment, resource recovery, bioenergy and bioproducts, and sustainable design and decision-making.

Her office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328A. She can be reached via email at yalin.li@rutgers.edu or via telephone at 848-445-2870.

Dr. Ali Maher received his PhD from The University of Michigan. He also holds a Professional Engineer's license. His areas of research include soil/site improvement; soil composite materials; geosynthetics, environmental geotechnology; soil dynamics.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328G and the CAIT Building on Busch Campus, Room 211E. He can be reached via email at mmaher@soe.rutgers.edu or via telephone at 848-445-2951.

Dr. Monica Mazurek received her PhD from The University of California-Los Angeles. Her areas of research include air quality engineering; organic geochemistry; analytical chemistry for environmental systems; sustainability systems engineering.

Her office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 322F. She can be reached via email at mmazurek@soe.rutgers.edu or via telephone at 848-445-2871.

Dr. Husam Najm received his PhD from The University of Michigan. Dr. Najm holds both a Professional Engineer's and Structural Engineer's license. His areas of research include structural system design; bridge design; concrete materials.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 424G. He can be reached via email at hnajm@soe.rutgers.edu or via telephone at 848-445-7980.

Dr. Hani Nassif received his PhD from The University of Michigan. He also holds a Professional Engineer's license. His areas of research include reliability analysis; design, analysis, and field testing of bridges; advanced high-performance materials; structural modeling and analysis

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 322E. He can be reached via email at nassif@soe.rutgers.edu or via telephone at 848-445-4414.

Dr. Efthymios (Thymios) Nikolopoulos received his Ph.D. degree from the University of Connecticut. His area of research includes monitoring and modeling of hydrologic hazards and assessment of climate change impacts on the natural and the built environment.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328A. He can be reached via email at efthymios.nikolopoulos@rutgers.edu or via telephone at 848-445-9338.

Dr. Tyler Oathes received his PhD from the University of California, Davis. His areas of research include, constitutive modeling, stability analyses of earthen structures, geotechnical earthquake engineering, and viscous behavior and strain-softening in plastic soils.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328G. He can be reached via email at tyler.oathes@rutgers.edu or via telephone at 848-445-9339.

Dr. Hao Wang received his PhD from The University of Illinois at Urbana-Champaign. His areas of research include sustainable infrastructure material and system, computational modeling and mechanics; highway and airport pavement; and life-cycle analysis and assessment.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 428E. He can be reached via email at hwang.cee@rutgers.edu or via telephone at 848-445-2874.

Dr. Roger Wang received his PhD from Massachusetts Institute of Technology. His areas of research include developing numerical models to connect big data and decision-making in civil and environmental engineering systems, such as data-model Interface and model-based decision making.

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 328E. He can be reached via email at rj.wang@rutgers.edu or via telephone at 848-445-4288.

Dr. Yook-Kong Yong received his PhD from Princeton University. His areas of research include crystal plates; structural behavior and mechanics; finite element analysis; structural dynamics; computational mechanics

His office is located in Richard Weeks Hall of Engineering on Busch Campus, Room 322D. He can be reached via email at yyong@soe.rutgers.edu or via telephone at 848-445-3219.
